

New Wireless Streaming Platform

We're pleased to advise that Titan Airways' new wireless in-flight entertainment system is available on your all Titan Airways flights operated on our Boeing 757 and Airbus A320 fleets.

The system enables you to stream digital content (ranging from Hollywood films and popular network series to newspapers, magazines and music) to your iPad, iPhone, Kindle tablet or Google Android device.

To access the digital content onboard, you will need to download our App prior to departure by following the below device dependent links:

- Apple iOS
<http://itunes.com/apps/titanife>
- Google Android
<https://play.google.com/store/apps/details?id=com.aerofi.titan>
- Amazon Kindle
<http://www.amazon.co.uk/gp/product/B00WWOXFMM>

or by searching for "Titan Inflight" in the appropriate App store.

Once onboard your Titan Airways flight, connect to the wireless network "Titan IFE", before opening the pre-downloaded App, then simply sit back, relax and enjoy the entertainment on offer.

Should you encounter any problems with the system, you'll find trouble shooting tips in the seat pocket in front of you.
