

Boeing 737-400F: Cargo

In February 2017 Titan Airways introduced our first Boeing 737-400F, a dedicated freighter aircraft. The 734F, registered G-POWP, is an eleven pallet configuration freighter able to carry 88"x125", 88"x108" and 96"x125" containers or pallets. The aircraft is capable of carrying up to 18,000kg of cargo with a volumetric capacity of 149m³. The aircraft currently operates a nightly weekday service carrying time critical mail freight for the UK postal service, helping to ensure the safe delivery of thousands of items of post on a daily basis. Outside of those commitments - during the day on weekdays and at the weekend - the aircraft is available for ad hoc cargo charter. Like all the aircraft in the Titan fleet, G-POWP can be launched at short notice in response to urgent charter requests.

Specification

- Capable of carrying up to 18,000kg of freight with a volumetric capacity of up to 149m³
- Containerised/palletised freight system
- Ability to operate out of small regional or major international airports
- Ability to operate in poor weather conditions
